

***ADVANTAGES OF AN ARCHITECTURAL
SPECIALTIES, INC. GLAZING SYSTEM***

- ◆ ARCHITECTURAL SPECIALTIES, INC. glazing system does not have exposed fasteners on exterior or interior surfaces.
- ◆ A.S.I. will always contain glass on all sides. Some manufacturers / installers will leave sill area unflushed, causing failure of insulated glass unit seals.
- ◆ A.S.I.'s weeping system has an interior baffle which allows moisture / condensation to weep to the outside. Other systems use evaporative gutters which does not accommodate extremes in internal and external environmental conditions.
- ◆ A.S.I. does not rely on caulking for weather tightness as other systems might.
- ◆ A.S.I. seams all sill ends for weather tightness and a clean professional presentation.
- ◆ A.S.I.'s glazing system has clean architectural lines without an "I-Beam" look.
- ◆ A.S.I. uses materials that are stocked and available locally.

***A Family Owned Company Manufacturing
Quality Products Since 1988***
